Abstract: This article explores the importance of speech for students in the educational process, its effective aspects, and the connections between education and speech. It discusses how fluent and meaningful speech can positively enhance the teaching and learning process, and examines the critical role of speech education in developing self-expression, communication, and the ability to exchange ideas. Additionally, it provides information on innovative methods and technologies for implementing speech education in modern teaching. Ultimately, the article highlights the significance of speech education not only in academic contexts but also in social life.

Key words: Speech, education, speech culture, thinking, language, word, thought, individual development, psychological processes, communication.

As we all know, today our independent Motherland is developing day by day in every field. In particular, we can see huge changes in the field of education. Of course, the level of development of education depends on the citizens of each city and country. If the worldview of citizens is broad and spiritual, the field of education will flourish, and the opportunity to conquer high peaks in the world will increase. Also, if the speech of both the teacher and the student is well formed during the educational process, the lesson will go well. Speech is one of the main obstacles for a pedagogue to convey information to students, and every pedagogue should have the ability to express his speech fluently,

meaningfully and comprehensibly. Of course, this ensures the quality of the educational process. In addition, each person should improve his or her speaking skills in the main place for his personal development. As a proof of our opinion, we can cite the thoughts of A. A. Leont'ev. "The development of children's speech is, first of all, the development of forms of communication that require the formation of language skills." The historically formed content of human experience is summarized in a verbal form, and its description and assimilation presupposes the participation of speech in this process. Speech opens the way for everyone to all the achievements of human culture. In addition, the formation of each individual personality and all the main mental processes is also related to the development of speech in a person. We should also know that the most important stages of speech acquisition in the educational process are preschool age. All this knowledge serves as a basis for learning new things in life. Enriching the motivation of speech activity increases the effectiveness of work on the development of children's speech. Speech is seen as a historically formed form of integrated activity and language-related communication, such as a speech act added to a non-speech action. Based on this, we can confidently say that speech is the main and component of education. Speech plays an important role in the development of thinking and communication skills in education. Through speech, people have the opportunity to express their thoughts, communicate effectively with others, and strengthen social relationships. In addition, to develop thinking skills, students learn to clearly express their thoughts, which is logical. increases the ability to think and analyze. Self-expression: Students learn to express themselves clearly and understandably, as well as the skills of responding and arguing. learn to communicate effectively, pay attention and listen. Emotional Intelligence: Students develop the ability to express their own emotions and understand the emotions of others.

Speech education also includes important tasks for teachers, such as evaluating students' speech, helping them express their thoughts, and developing communication skills in various situations. As a result of this process, students become more active and more successful in self-directed learning. Also, while thinking about the role of the speech process in education, we should also dwell on the concept of speech culture, because

speech culture is language norms, pronunciation, accent, sentence structure, speech acquisition. . is a deep knowledge of the laws of the correct use of words. In addition, language in speech is a means of exchanging ideas, a mirror that reflects the student's heart, a tool that fully demonstrates the student's teaching style and pedagogical skills. If different language tools are expressed in the speech, such a speech is considered a rich speech, because we can have a meaningful speech using the existing possibilities of the language. It is equally required in spoken or written speech. For every pedagogue, the culture of speech during the lesson, the technique of conveying ideas to the student is a very important factor. On the other hand, speech is necessary for the student to show his knowledge and to what extent he understands the information explained by the teacher. There are also communicative qualities of speech:

Correctness of speech

Clarity of speech

Cleanliness of speech

Effectiveness of speech

Brevity of speech

Expressiveness of speech

Appropriateness of speech

Logic of speech

The role of speech in education is crucial, as it facilitates the exchange of knowledge and the process of communication. Speech enables students to express their thoughts, ask questions, and engage in discussions, which enhances their thinking and comprehension skills. Additionally, through the teacher's speech, information is presented clearly and systematically, allowing students to improve their creative thinking and communication skills. Moreover, speech plays an important role in developing social skills, as students learn to respect each other's opinions and understand responsibility during the communication process. Overall, speech increases the effectiveness of the educational process, encouraging students to think independently and actively participate in social interactions. As a result, students can achieve higher outcomes. Through speech,

students learn to articulate their knowledge and personal opinions clearly and fluently, which helps them succeed in their educational journey.
