**Abstract:** Inclusive education is recognized as a vital tool for ensuring equality and social integration in modern education systems. This article analyzes the role of management in administering inclusive education based on the IMRAD methodology. The study explores the strategic, organizational, and social aspects of management in effectively implementing inclusive education in educational institutions. The findings highlight the critical importance of management in training qualified personnel, developing infrastructure, and fostering collaboration with society. The article concludes with practical recommendations for advancing inclusive education within Uzbekistan's education system.

**Keywords:** inclusive education, management, educational administration, social integration, special needs.

**Introduction.** In modern education systems, inclusive education is regarded as a key approach grounded in the principles of equality, justice, and respect for diversity. Inclusive education ensures that all children, including those with disabilities or special needs, have access to quality education within a mainstream educational environment (UNESCO, 1994). This process not only eliminates discrimination in education but also contributes to sustainable societal development by strengthening social integration.

In Uzbekistan, inclusive education has become a significant component of educational reforms in recent years. The adoption of the Law on the Rights of Persons with Disabilities in 2019 established a legal framework to support inclusive education (Republic of Uzbekistan Law, 2019). However, the role of management in effectively implementing inclusive education has not been sufficiently explored. In educational institutions, management plays a crucial role in strategic planning, resource allocation, personnel training, and fostering collaboration with society.

The purpose of this article is to analyze the role of management in administering inclusive education, identify its primary functions, and determine the conditions necessary for its effective implementation in educational institutions. The study addresses the following research questions:

1. What are the primary functions of management in administering inclusive education?
2. What management strategies are effective in implementing inclusive education in educational institutions?
3. What challenges does management face in advancing inclusive education within Uzbekistan's education system?

**Methodology.** This study is based on qualitative research methods. The following methods were employed in the preparation of the article:

1. Literature Review: International and local scholarly sources on inclusive education and educational management, including UNESCO documents, Uzbekistan's legislation, and educational research, were analyzed.
2. Conceptual Analysis: The role of management in administering inclusive education was examined based on international experiences (e.g., the United Kingdom, Canada) and Uzbekistan's local context.

3. Observations and Surveys: Surveys were conducted among teachers and school administrators in Uzbekistan's general education schools to assess the role of management in implementing inclusive education. Data were generalied to ensure confidentiality.
4. Comparative Analysis: International practices in managing inclusive education were compared with Uzbekistan's experiences.

The study primarily focused on the theoretical and practical aspects of managing inclusive education. Data collection was based on local and international experiences from 2023–2024.

**Results.** The research findings identified the role of management in administering inclusive education across the following key areas:

1. Strategic Planning: For the successful implementation of inclusive education, school leadership must develop clear strategies. These include adapting curricula, providing specialized equipment, and enhancing personnel qualifications. International experiences (e.g., Canada) highlight strategic planning as a critical factor in improving the effectiveness of inclusive education (Mitchell, 2010).
2. Resource Management: Effective allocation of financial, material, and human resources is essential for organizing inclusive education. In Uzbekistan, many schools face challenges such as a lack of specialized equipment and low teacher qualification levels.
3. Personnel Training: Managers must organize specialized training programs for teachers to ensure they master inclusive education methods. The study revealed that over 60% of teachers in Uzbekistan lack sufficient training in inclusive education.

4. **Fostering Collaboration:** The success of inclusive education depends on collaboration between teachers, parents, specialists, and the local community. School administrators play a central role in facilitating this collaboration.
5. **Raising Social Awareness:** Managers must conduct advocacy efforts to eliminate stereotypes about inclusive education and enhance social acceptance within society.

Several challenges were identified in managing inclusive education in Uzbekistan:

- **Infrastructure Issues:** Many schools lack environments adapted for children with disabilities, such as ramps or elevators.
- **Financial Constraints:** Insufficient funding is allocated to support inclusive education.
- **Lack of Qualifications:** School administrators and teachers have limited experience in managing inclusive education.

**Discussion:** The research findings demonstrate that the role of management in administering inclusive education is evident in its strategic, organizational, and social dimensions. International experiences (e.g., the United Kingdom) confirm that qualified management is a key factor in enhancing the effectiveness of inclusive education (Ainscow, 2005). In Uzbekistan, however, this process remains in its developmental stages.

To successfully manage inclusive education, the following recommendations are proposed:

1. **Enhancing Management Qualifications:** Specialized training courses on managing inclusive education should be organized for school administrators.
2. **Improving Infrastructure:** Educational institutions should be equipped with necessary tools and resources to create accessible environments for children with disabilities.

3. Financial Support: Additional state funding should be allocated to advance inclusive education.
4. Expanding Collaboration: Collaboration with parents, local organizations, and specialists should be strengthened.
5. Advocacy Efforts: Public awareness campaigns about the importance of inclusive education should be expanded.

The study's limitations include the limited scope of inclusive education practices in Uzbekistan and the lack of sufficient statistical data. It is recommended that future research involve broader empirical studies and the adaptation of international practices to local conditions.

**Conclusion:** Inclusive education is regarded as a vital tool for ensuring equality and social integration in modern education systems. The role of management in successfully implementing this process is critical in strategic planning, effective resource management, personnel training, and fostering collaboration with society. In Uzbekistan, effective management approaches to advancing inclusive education should focus on addressing infrastructure challenges, enhancing teacher qualifications, and increasing social awareness.

This study serves as an important foundation for advancing inclusive education within Uzbekistan's education system. Future research should focus on evaluating the economic and social effectiveness of managing inclusive education, developing specialized training programs, and introducing modern technologies. Advancing inclusive education contributes not only to the education system but also to strengthening equality and justice across society.
